MITCHELL KURK, D.O., the Respondent, was authorized to practice medicine in New York State on September 26, 1960 by the issuance of license number 084977 by the New York State Education Department. The Respondent is currently registered with the New York State Education Department to practice medicine for the period January 1, 1995 to July 1, 1997 at 310 Broadway, Lawrence, New York.

FACTUAL ALLEGATIONS

- A. On or about March 27, 1986 and April 17, 1986 the Respondent treated Patient A at the North Nassau Mental Health Clinic, Division of Nutritional Medicine, located at 1691 Northern Boulevard, Manhasset, New York. (Patient A and the other patients in the Statement of Charges are identified in the Appendix.)

Patient A, a 52 year old male, complained of migraine like headaches accompanied by nose bleeds, which he had been

experiencing two to three times a week for approximately four months. Respondent attributed Patient A's headaches and nosebleeds to hypertension. Patient A's blood pressure was 154/90 at the initial visit and 136/84 at the second visit. Respondent ordered a hypoglycemic and no-salt diet, garlic pills, vitamins, and an eye examination.

At the second visit, 3 weeks later, Respondent recommended that Patient A see an ear, nose and throat specialist if his headaches and nosebleeds persisted for another month. He also prescribed a bioflavonoid and Vitamin K. Two days after the second office visit to Respondent, Patient A presented to the emergency department of Franklin General Hospital, Valley Stream, New York, with an acute cerebral hemorrhage secondary to a ruptured cerebral aneurysm. Respondent initially treated Patient C for injuries related to a motor vehicle accident which had occurred several weeks before she presented to Respondent. Respondent ordered SMA 12, chemistry and hematology laboratory screens. The laboratory results were normal with the exception of a slightly elevated calcium of 10.8 mg/dl.

Over the course of seventeen months of treatment, Patient C's blood glucose level rose from 127 mg/dl on June 2, 1989 to 381 mg/dl on November 20, 1990. During the period of treatment regarding Patient C, Respondent:
